

[PERSONAL DATA ASSISTANT (PDA) USING A REMOTE SERVER FOR PROCESSING]

Abstract of Disclosure

A personal data assistant (PDA) that is connected to a server via a network. The server has application programs. The PDA has a housing, a memory installed in the housing for storing programs and data, a processor electrically connected to the memory for executing the programs stored in the memory, a display panel installed on the housing for displaying data, and an input device for inputting data. The PDA can send a file to the server via the network. The server can then open the file using a corresponding application program and send a picture image of the opened file back to the PDA.
